

Giotto I500

 **SGM**[®]
Entertainment Lighting

Powerful, Radical, Modular, Expandable,
Irreplaceable.

Giotto I500

Brightness: this is the feature that distinguishes **SGM Giotto I500**.

And increased luminous intensity is just one of the new features in a series manufactured using **technology** which opens up **enormous possibilities** for greater use

of moving head fixtures. Rather than a range of products, the Giotto I500 is an ingenious **expandable modular system**, which enables **each individual fixture to be configured** with the exclusive characteristics of different instruments.

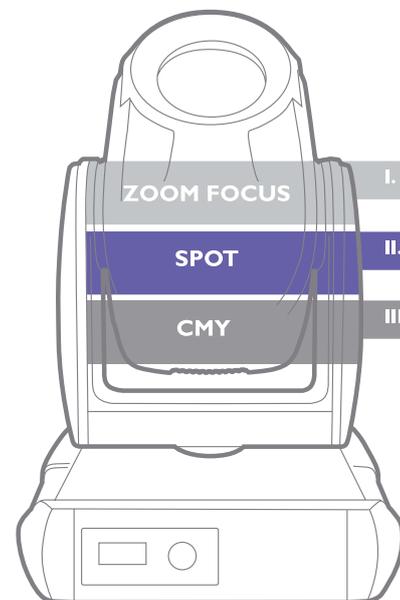

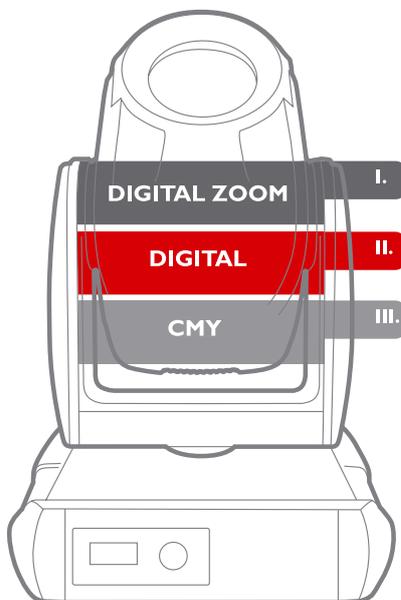

Configurations

According to each project's needs, designers can personalise the unit, making it a **Spot**, **Wash**, **Profile**, **Beam** or **Digital** simply by changing the modular optics. Once the chosen version's modules are assembled, the fixture's electronics and the software will "identify" them and automatically adapt to suit them.

Digital configuration

Spot configuration

The concept of modularity on which the fixtures in the **Giotto 1500** are based makes them exceptionally flexible to use. And, because the modules can be updated new functions can easily be integrated without changing the entire fixture.

 Digital configuration

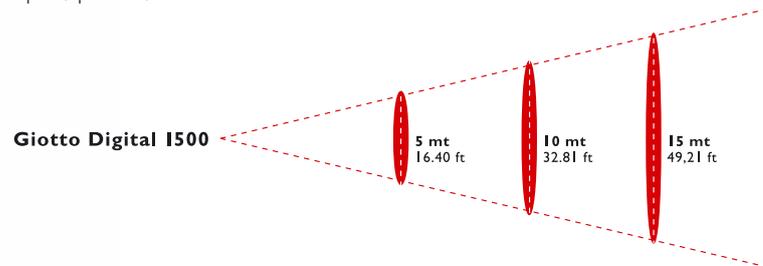

GIOTTO 1500 assumes a revolutionary Digital format, with a unit combining the **“CMY”** module and the new **“Digital”** and **“Digital Zoom Focus”** modules.

Giotto Digital 1500 stands out for the fact that it has the typical format of a moving head fixture designed and manufactured mainly for entertainment

lighting, but is equipped with an innovative all-digital system for the generation of graphic effects, while maintaining fundamental features such as fast movement, brightness, control standard and compact dimensions. **“CMY”** module, with CMY colour mixing system, linear CTO filter and DIMMER.

“Digital” module, with graphic processor (two simultaneous layers), expandable and customizable image (*.bmp or *.jpg format) and video clip (*.avi format) library, two customizable 6+5 colour +white wheels (Digital configuration).

“Digital Zoom Focus” module, with high resolution focus and zoom optic, prisms, shutter and linear frost.

LAMP

- _ MSR GOLD 1200 FastFit - adjustable from 900W to 1400W (6.300°k)
- _ Compatible MSR GOLD 1500 FastFit (6.400°K)
- _ HTI 1500 W/60/P50 Lok-it! (6.000°K)
- _ Average lamp life 750 hr.
- _ Fast restrike
 - _ Remote lamp on/off via DMX.
 - _ Lamp power reduction in the event of overheating
 - _ Lamp elapsed time and strike counter

PAN & TILT

- _ 530° Pan (4 sec.).
- _ 250° Tilt (3.4 sec.).
- _ Pan / Tilt Lock; electronic Pan / Tilt unlocking.
- _ Pan/Tilt w. 8/16 bit resolution
- _ Automatic Pan/Tilt repositioning

SETTINGS

- _ Settings via on-board microcomputer viewable on display (even with fixture off)
- _ Display "flip" function (rotates through 180°)
- _ Adjustable display brightness
- _ Fixture elapsed time indicator

- _ On-board temperature sensors (base, power, one for each module)
- _ Total fixture software update via DMX
- _ Graphic display (128 x 64)

CONSUMPTION

- _ Max consumption: 2,000 W
- _ Automatic energy saving in the event of blackout use

ELECTRIC SPECIFICATION

- _ Power supply with PFC (universal 90/245V 50/60Hz); protected against 400V
- _ Electronic Ballast

INPUT

- _ DMX 512 or RS 232 input signal
- _ 64 DMX channels - Digital configuration
- _ Ethernet interface (ART-NET protocol)
- _ Wireless DMX interface fitted as standard
- _ RDM protocol implemented on DMX (monitoring of internal parameters)

DIMENSIONS (HxLxD) / WEIGHT

- _ 79 x 48 x 55 cm
- _ 45 kg - Digital configuration

DIGITAL ZOOM FOCUS MODULE

- _ Linear frost
- _ 1 rotating prism (4 facets)
- _ 1 fixed prism (5 facets)
- _ Motorized zoom (10°- 30°)
- _ Motorized focus
- _ Shutter
- _ Strobe 1-12 flashes/second, also with music sync
- _ Customizable *.avi format video clip library
- _ Customizable *.bmp or *.jpg format image library
- _ Library updating via WiFi (wireless)
- _ 1024x768 pixel image resolution obtained with 0,7 XGA DLP® chip
- _ 80 GB Hard Disk
- _ 2 simultaneous layers
- _ Effects for each layer: rotation and indexing, digital zoom, mirroring, negative converter effect
- _ Global effects: digital iris, indexable digital beam shaper, 13 crossfade effects between layers, brightness and contrast, black and white masking effect, V-H mirroring, kaleidoscope

DIGITAL MODULE

- _ 1 customizable colour wheel: 6 colours + white
- _ 1 customizable colour wheel: 5 multicolours + white
- _ Colour change with or without music sync and/or blackout
- _ Rainbow colour
- _ 2-tone beams
- _ High efficiency DLP® chip cooling system for maximum light output performance
- _ Special DLP® chip light engine exclusively designed for professional lamp used in the entertainment lighting with high CRI

CMY MODULE

- _ Advanced CMY colour mixing
- _ Linear CTO filter
- _ Linear dimmer

SGM technology for the Giotto Digital 1500 [patent pending]

All-digital Graphic Effects, Iris, Beam Shaper and Zoom.

Giotto Digital 1500 is the first and only moving head fixture on the market able to create all-digital completely customizable graphic effects, finally overcoming the typical limits of effects created using traditional gobo, iris, beam shaper and zoom set-ups.

Digital Graphic Effects

No more standard gobos.

With Giotto Digital 1500, in a few moments, all Designers can give their lighting new life and form, without being restricted by the ordinary use of standard gobos.

No more limits on the number of effects.

Giotto Digital 1500 provides new creative prospects for light plots, which can exploit of a practically endless library of images and clips.

No more waits and extra costs for custom gobos.

In a few moments, the Giotto Digital 1500 effects library can be expanded via WiFi with normal files in *.bmp or *.jpg and *.avi.

Digital Iris

The unit's digital iris effects, unobtainable up until now with a mechanical iris, offer more precise shapes and speed, closing to total blackout.

Digital beam shaper

The digital module offers the unique possibility of creating any shape by changing the position of four digital blades, avoiding all the problems typical of mechanical beam shapers, such as dimensions, inaccuracy and blade focus.

Optical and Digital Zoom

The mechanical zoom affects the light beam, enabling it to be smoothly opened or closed independently from the digital zoom. The digital zoom affects the digital effects individually for each layer, enabling to open or close the digital effect in the light beam.

Graphics Engine

Giotto Digital I500 also features a powerful graphics engine able to handle images and/or clips in a library that can be freely updated via WiFi. Effects are generated by means of two mixable layers.

Each layer can freely use any clip or image in the library. Effect rotation, indexing and digital zoom can be applied individually to each layer, along with mirroring and negative converter functions.

As well as this, a set of over-all effects can be applied to both layers: digital iris, digital beam shaper, 13 crossfade effects between the layers, brightness and contrast, black and white masking effect.

WiFi

The on-board graphic libraries can be easily updated via WiFi (wireless) connection, ensuring user-friendly library maintenance in any installation situation.

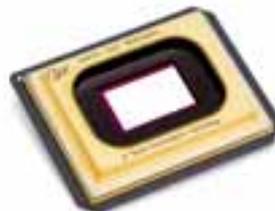

Kaleidoscope

Kaleidoscopic-type effects can be applied to images or clips in the first Layer. This enables to generate an almost endless quantity of static or animated shapes, even using a simple static source image.

Cooling

The DLP's patented liquid cooling system is highly efficient and enables an output of over 10,000 lumens.

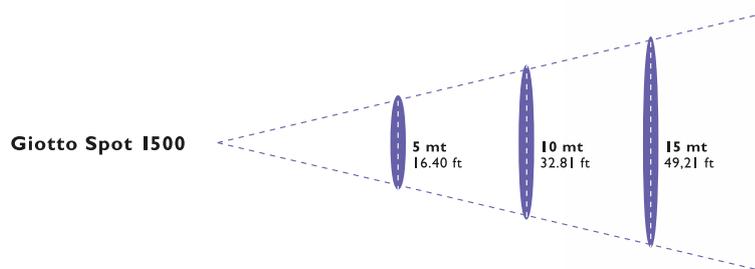

Spot configuration

In **SPOT configuration**, the **GIOTTO I500** is perfect for those looking for a fixture with top-class expressive potential, featuring practically endless effects and an extremely powerful light beam. Thanks to its exclusive assembly format, the unit is easily built, fitting the **“CMY”**, **“Gobo”** and **“Zoom Focus”** modules one after another.

The first module contains the CMY colour mixing system, linear CTO filter and Dimmer.

“Gobo” hosts the optic functions necessary for creating a vast range of light effects: a colour wheel (5 colours plus white), two gobo wheels (each with 6 gobos plus white) and a space for the interchangeable animation wheel. As well as motorized focus and zoom, the **“Zoom Focus”** module also has an additional lens with three interchangeable functions: a second non-rotary overlapping prism, Zoom range extension and Wash function.

Wash configuration

In **WASH configuration**, the **GIOTTO I500** features two modules: **“CMY”** (CMY colour mixing system, linear CTO filter and Dimmer) and the dedicated **“Wash”** module, with all the features that enable the fixture to emit diffused, soft even light.

The various functions include a twin-blade built-in beam shaper, which sculpts the light projected on to specific zones of the set or scene, a field diaphragm and the possibility of adjusting the soft edge of the beam shaper and the field diaphragm. The Zoom lenses enable to adjust beam aperture from 6° to 40°, whereas the Frost lens makes it perfectly even. Three dedicated lenses are available for the fixture in Wash configuration: The Fresnel Lens enables to obtain a beam for even colouring, the Anti-halo PC Lens gives a very narrow intense beam with a limited soft edge field and the Super Wide Lens gives a very wide even beam aperture.

- _ Linear CTO filter
- _ Linear dimmer

Profile configuration

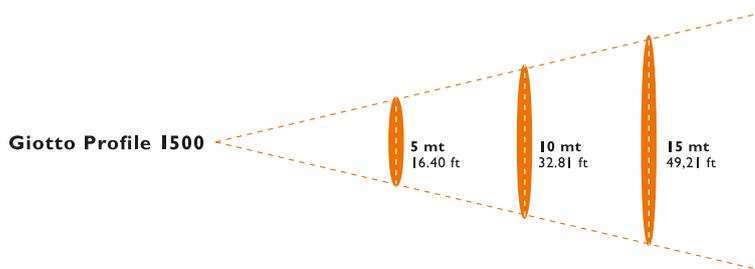

Thanks to the innovative internal layout, a **Giotto 1500 Profile** can be obtained by just fitting a **“Profile”** module between the first **“CMY”** module and the **“Zoom Focus”** module inside the fixture: this results in a high powered fixture with a vast range of effects that can be combined with the beam shaping feature typical

of this type of unit. The **“Profile”** module has a colour wheel (5 colours plus white) and a gobo wheel (6 gobos plus white), as well as a four-blade beam shaper that enables to sculpt the light beam into various well-defined geometric shapes.

These functions give their best when used with those of the **“CMY”** module (CMY colour mixing system, linear CTO filter and Dimmer) and **“Zoom Focus”** (motorized focus and zoom, plus additional lens with three interchangeable functions: second non-rotary overlapping prism, Zoom range extension and Wash function).

Beam configuration

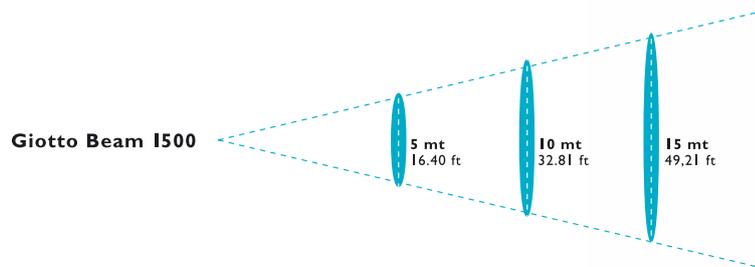

In **Beam configuration, Giotto I500** creates a very narrow, highly concentrated and powerful light beam. Its ideal application is on outdoor shows, to create light beams that can be clearly seen from a long distance. Thanks to the unit's special optics, light beam concentration can be adjusted in

order to set the beam's focal point at the required distance (a unique feature in the beam fixture sector).

Thanks to its exclusive assembly format, the unit is easily put together, fitting the **"CMY"** and **"Beam"** modules one after another inside.

The **"CMY"** module, with CMY colour mixing system, linear CTO filter and Dimmer, is common to all configurations. The **"Beam"** module consists in a customizable gobo wheel, six rotating indexable 16-bit gobos, indexable customizable colour wheel (six colours + white), frost lens, linear iris diaphragm, rotating prism (4-facets) and animation wheel.

- _ Wireless DMX interface fitted as standard
- _ RDM protocol implemented on DMX (monitoring of internal parameters)

DIMENSIONS (HxLxD) / WEIGHT

- _ 79 x 48 x 55 cm
- _ 43 Kg - Beam configuration

BEAM

BEAM MODULE

- _ Motorized zoom/focus (6°-12°)
- _ Shutter
- _ Strobe 1-12 flashes/second, also with music sync
- _ Customizable and indexable colour wheel: 6 colours + white.
- _ Colour change with or without music sync and/or blackout
- _ Rainbow colour
- _ 2-tone beams
- _ UV filter
- _ Frost lens
- _ Linear iris diaphragm
- _ 1 customizable gobo wheel: 6 rotating indexable gobos (16 bit)
- _ Gobo change with or without music sync and/or with blackout
- _ 1 rotating prism (4 facets)
- _ 1 rotating indexable animation wheel

CMY

CMY MODULE

- _ Advanced CMY colour mixing
- _ Linear CTO filter
- _ Linear dimmer

Wireless DMX

Giotto 1500 is fitted with wireless DMX as standard. It uses technology based on the ideas of GSM, but with operating in the license free band 2,45GHz and with a radius of over 500 metres. It has been widely tested in environments with Wi-fi, Bluetooth and GPRS-UMTS signals, with excellent results and true plug and play solution.

RDM Protocol

Giotto 1500 features RDM protocol implemented on DMX as standard. The 2-way (talkback) protocol enables real-time fixture control and monitoring, and the units are able to send information and messages regarding their status, it is also possible to set the address of the fixture's various parameters via DMX.

Ethernet Interface

Giotto 1500 is equipped as standard with an Ethernet interface that enables the fixture to be controlled via Art-net data transmission protocol.

On-board microcomputer

Giotto 1500 is fitted with a microcomputer that allows to customize the fixture according to the type of installation. It's possible to set pan and tilt movement, obtain information on lamp life and fixture running time, run test programs, etc., all using the built-in display.

Setting parameters on the display

Giotto 1500 offers the possibility of setting all the necessary operating parameters without any mains power supply. This facility is particularly useful for touring applications. A DIAL and two keys (ENTER and ESC) alongside the display enable intelligent navigation of the various sub-menus in the main menu. High-resolution 128x64 pixel graphic display with blue backlight.

Automatic Pan/Tilt unlocking

A unique feature in the market, and particularly useful for touring applications, where it's necessary to constantly transport fixtures with their pan and tilt blocked. Should the operator forget, the fixture automatically unlocks Pan and Tilt when it is switched on.

400V Protection

Those working in the live entertainment industry are well aware of what happens when the power supply's neutral wire comes loose! The fixture gets a 400V "shock" that causes considerable damage. Giotto 1500 is protected against "Misfortune", all electronic components are designed to ensure protection against accidental incorrect power supplies. The fixture can be operated with a power supply of between 90 and 260V, a very useful feature for those who use power generators.

Ballast PFC

A unique feature for the lighting world is that the ballast and PFC are integrated in a single module that can be easily replaced by just disconnecting three connectors and is fitted with a silent forced ventilation cooling system.

Precise rapid movement

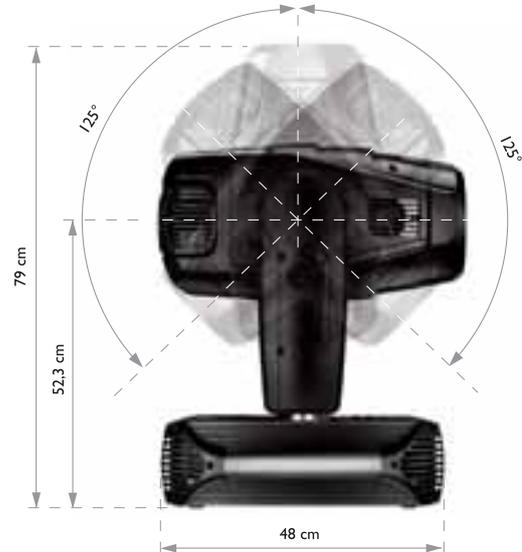

Movement precision and speed are ensured by powerful stepper motors.

Control is entrusted to a 16-bit system, inertia and acceleration times perfectly distributed and the excellently balanced mechanism guarantee precise smooth movement and high speed (530° PAN in 4 seconds and 250° TILT in 3,4 seconds).

Lamp

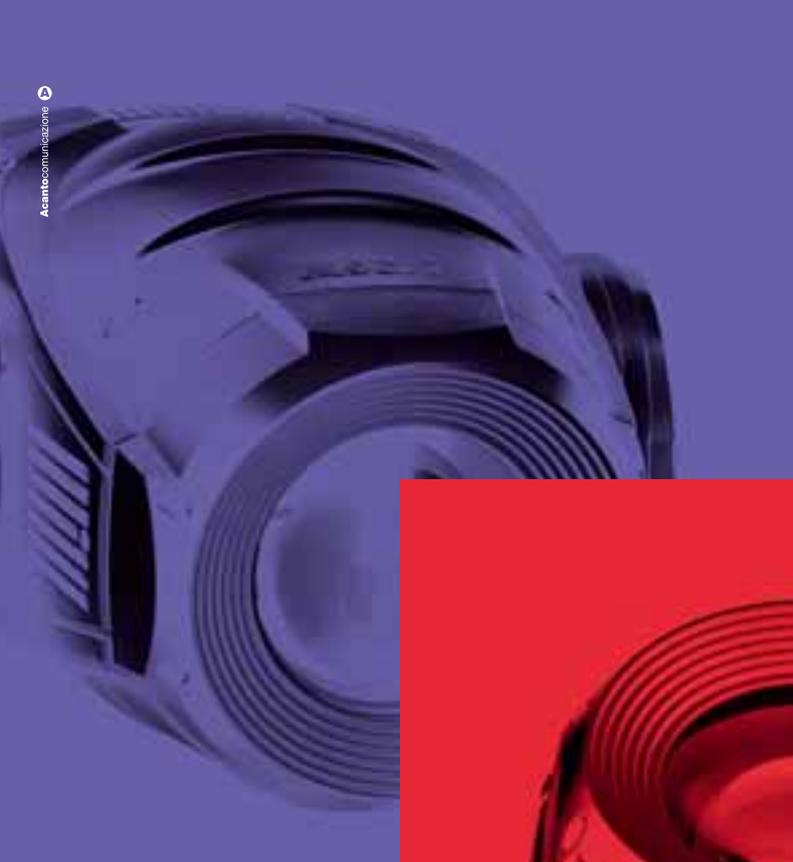

Giotto I500 is fitted with a single-ended lamp with a quarter-turn fastener, thus ensuring easy, rapid maintenance.
